# MAIN CONTROL VALVE REPAIRS

FOR HITACHI MINING EQUIPMENT

**WE REPAIR  
COMPLETE  
SECTIONS**

## REPAIRS ENGINEERED TO DELIVER OEM LEVEL PERFORMANCE

Hitachi Mining Equipment Main Control Valve repairs involve repairing or replacing complete sections of the valve entirely. Our repair program includes 100% replacement valves and valve components that directly interchange with all EX2500, EX2600, EX3600, EX5500, EX5600, and EX8000 series excavators and shovels. All materials, components, and assemblies have been carefully engineered, manufactured, and tested 100% in the USA. Providing a very high quality product that will endure through the harshest conditions like you'd find in heavy mining operations.

**For components that work as hard as you do, choose our Quality Engineered Components.**

Quality Engineered Components

# OUR REPAIR PROGRAM INCLUDES 100% REPLACEMENTS

## DELIVERING OEM LEVEL PERFORMANCE

Our American team of experts have been repairing and remanufacturing main control valves for many years now. And that includes the main control valves found on Hitachi Mining Equipment. Every repair is meticulously and craftfully handled, with each valve being thoroughly tested to ensure it's operating at or above OEM level performance. This means you get a component back that will provide the necessary service life that is expected from the heavy mining industry.

## SAVE TIME WITH AN EASY REPLACEMENT

Unlike, other repair programs for main control valves, our program includes the ability to provide 100% new replacement parts for the repair. Many other programs out there will re-use or reman components to make do: we don't for the mining related units. Their demand and use is far too critical for that. Our replacement parts not only interchange directly with your machines' original control valve, but we have taken the additional effort to ensure each individual internal component is also directly interchangeable.

## NEED A LITTLE RELIEF WITH VALVE PARTS?

Additionally, we stock the relief and check valves found on the main control valves. These are also engineered and manufactured to exacting standards and are ready for rugged reliable operation. And additionally, these units interchange directly with the current ones found on your main valve.
